Car-Net

Car-Net via Wi-Fi hotspot
Setting up an Internet connection via Wi-Fi in order to use Car-Net
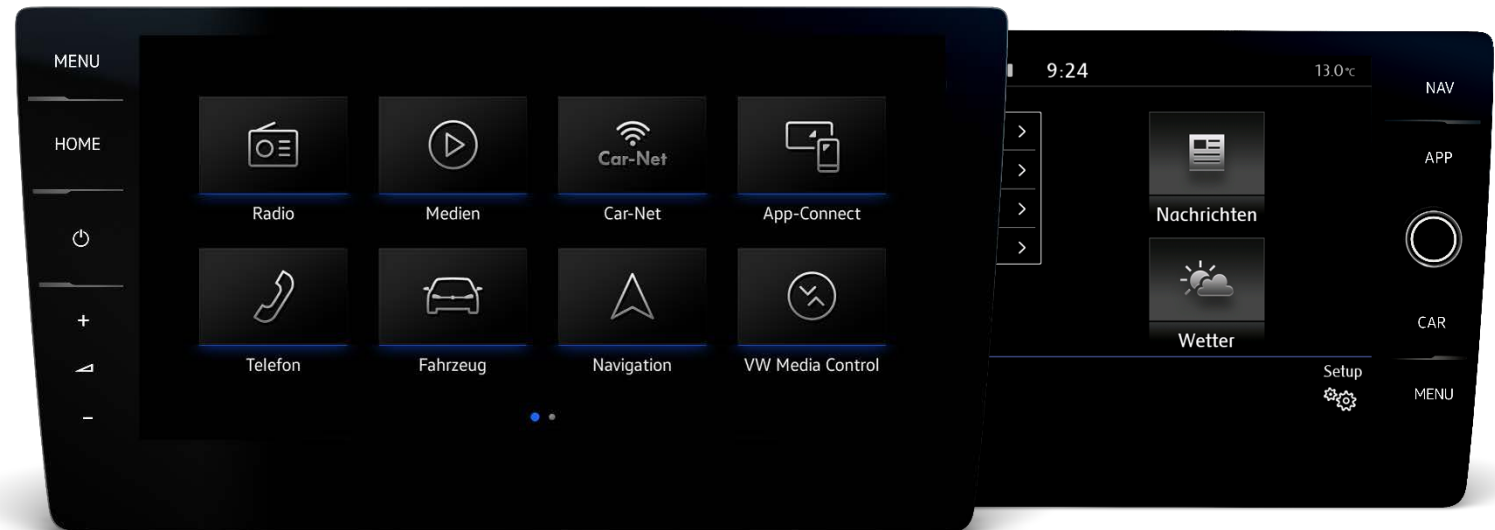

Dear driver,

Here you find out how and under what requirements a Wi-Fi Internet connection to your infotainment system can be set up in order to be able to use Volkswagen Car-Net.
However, this brochure does not describe all functions and therefore cannot replace the manual for the vehicle, which contains many important disclosures and warning notices.

Frequently asked questions about Volkswagen Car-Net can be found on the Volkswagen Car-Net web page under the menu item „Help/FAQ".
Brief information about Volkswagen Car-Net

With the optionally available Volkswagen Car-Net, you arrive at your destination more relaxed - and with greater reliability. The system is permanently updated via the Internet and therefore uses the most current data. Searching for a parking space and circumnavigating traffic jams is now becoming even easier.

The availability of Volkswagen Car-Net and its terms may vary depending on the vehicle and country. Further information about Volkswagen Car-Net is available at http://www.volkswagen.de/Car-Net and from your Volkswagen service partner and information about your mobile tariff conditions from your mobile phone system provider.

Available connection technologies

In order to use Car-Net, the infotainment system must be online. Here, you can see different connection technologies for creating an Internet connection.

Mobile phone interface "Business" *
Discover Pro

LTE Car Stick
Discover Media

Car-Net via Wi-Fi hotspot
Discover Pro and Discover Media

Go online via "Wi-Fi"

In the described solution the Internet connection will not be created by the infotainment itself but by a different medium (e.g. Wi-Fi hotspot of a mobile phone). ** The linked mobile phone takes on the role of a modem and the infotainment system becomes the "client".

* rSAP is a Bluetooth profile that must be supported by the mobile phone.

** The Internet connection via Wi-Fi only works if none of the above-mentioned solutions is used.

Step by Step:

# The infotainment system as Wi-Fi client

1

2

3

4

Switch on the mobile device and activate it as a "Wi-Fi hotspot" (depending on device e.g. by main menu → settings → wireless connections).***

Switch on the visibility of the hotspot at the device. Now the hotspot name and the network key will be displayed, for example.
Now change to your infotainment system and activate Wi-Fi by main menu → settings → Wi-Fi.

Activate Wi-Fi in the displayed menu and start the search for a hotspot.

Choose your mobile device.

Enter your network key.

The hotspot is now connected (shown by the check mark). The connection will be automatically activated if the hotspot is switched on and within range.

By pressing the dustbin symbol the connection to the hotspot will be deleted.

Your infotainment system is now ready to use Volkswagen Car-Net. You can select the services in the relevant menu.

*** Please note that the Wi-Fi Hotspot will be switched off and must be activated again depending on the device.
